

Revival Wine Cellar Enclosures

Step 6: Insert Panels

A. Sidelites: Install sidelite clips as shown in detail, using 3 clips per side on panels less than 90" and four clips per side on panels over 90". Take care to orient the clips properly. After clips are attached, insert the panel in the frame. The sidelite clips will engage the outer groove on the inside of the frame, and the back of the panel will press against the weatherstripping at the back of the frame. Groove between panel and frame can be sealed with caulk if desired.

B. Door(s): Re-install door panels and verify correct lock operation. Latch holes can be enlarged using a Dremel tool if needed.

C. Touch up any scratches with the patina touch up kit.

Enjoy your new wine cellar!

Sidelite Clip Detail

Note: Sidelite Panels have tapered edges. The larger side faces outward.
